

PSTAT 10 Worksheet 10

Due 7/26/22

For this worksheet, we need the following packages:

```
library(tidyverse)
library(socviz)
```

2012 Election Vote Share

See if you can reproduce this plot exactly. For each sex, the x -axis displays the percentage of votes for Obama coming from a given political group.

For example, a little under 35% of men who voted for Obama identified as moderates while over 35% of women who voted for Obama identified as moderates.

The data comes from `socviz::gss_sm` and the relevant variables are `polviews`, `sex`, and `obama`.
